1 Year.....	60 \$50.00

Lawton and Eldorado blackberries.

Cumberland and Gregg blackcap.

Cuthbert and St. Regis red raspberries.

Youngberries and Loganberries	10	100
1-Year transplants.....	90	\$7.50
Tips, first year spring.....	50	4.00

Strawberries, \$5.00 per 1,000; 75c per 100

Varieties—Clark Seedling, Improved Clark, Adkins.

A Few Suggestions for Planting a Young Orchard

First, decide on the location which should be a deep, well drained soil, with good soil and air drainage, preferably a north or eastern slope, in most localities these slopes are considered best.

After your location has been selected, prepared and staked the desired distance, (in preparing the ground, the deeper the plowing the better) dig a hole of sufficient depth and width to admit all roots without cramping, placing top soil in one place, and bottom soil in another. Secure a well rooted, sturdy tree of the desired variety. Cut away all broken or injured roots from the under side. Place tree in the hole about

two inches deeper than it was in the nursery row, or about even with junction bud. Spread roots evenly so they will feed from all sides, place top soil in bottom and pack well, even with top, then place two or three inches of loose soil on top. Hoe and cultivate well during the growing season.

In pruning — Space the main structural branches on trunk six inches apart. This will form a strong trunk and thus avoid crotch splitting in the future. Four or five main branches should be sufficient to form a well balanced tree.

Number of trees required to plant an acre at given distances apart:

	Rectangular or Square Method	Hexagonal
16 x 16.....	170.....	196
18 x 18.....	134.....	154
20 x 20.....	108.....	124
22 x 22.....	90.....	104
24 x 24.....	76.....	87
26 x 26.....	64.....	74
28 x 28.....	56.....	64
30 x 30.....	48.....	55

Most varieties listed are of my own growing from buds and scions, personally selected, from my own orchards. Hence, you are assured of not only getting trees true-to-name, but of selected type, known vigor and productiveness also.

The quantity of trees I grow is limited to the number I can give my personal attention to the propagating, growing, handling and shipping. By this plan I feel sure that every tree will be of the kind purchased as well as the proper grade, vigor and health and should give you entire satisfaction.
